|	
Purpose:	To allow easy graphing of multiple csv files from the LogProcessStats application
Usage:	
<CTRL>+<SHIFT>+I	Brings up a file select dialog box where you can select the log file you would like to import. If there is not an empty sheet to place the data a warning will be displayed and no data will be imported
<CTRL>+<SHIFT>+C	Brings up a message box allowing you to clear call sheets. If you select yes, all sheets will be cleared. If you select no then only the currently active sheet will be cleared.
Note:	If you wish to save the data and graphs then you must choose to save this file with a different name, otherwise all data will be lost upon exit
